New RailHub technology – sell rail tickets across Europe simply and at best prices

Rail travel is the trend, and has been for over 30 years at Online Travel. As a leading railway technology provider, the IT specialist from Switzerland offers its customers a single-entry interface to the European railways.

With the latest technological advancements of Travelshop and the RailHub, rail travel in Europe can be planned with ease. Using the intuitive online booking platform, SNCF, DB, ÖBB, Trenitalia and SBB train tickets, accommodation, and a wide range of additional services can be easily combined into a package or booked as individual services. The technology accesses rates that are updated daily via direct interfaces to the individual service providers and checks their availability within seconds.

Helpful functions such as best-price search, seat reservations and night train bookings are part of the standard scope of services. All tickets can also be issued immediately as PDF files via the booking platform.

Tour operators, OTA's, leisure and business travel agencies can connect via an easy to implement API or a white label solution at low cost. Raitour suisse and ÖBB Rail Tours are the first well-known rail tour operators to make use of the new technology.

Alternatively, tour operators have the option of integrating their own rail contracts or purchasing tickets directly from raitour suisse and benefiting from an attractive retail commission.

Visit us at the ITB Berlin, Hub27, booth 204.
